 SECTION 1

AI Advisor & Business Intelligence

Core AI advisory tools that power OptivianAI's Decision Intelligence capabilities — a connected AI manager for launching products, programs, and ventures.

AI Business Advisor

Ready

Acts as a practical advisor through the complete product/program journey. Provides structured guidance with input forms for industry, company size, stage, and goals.

AI

Advisory

Decision Intelligence

Requirement Analyzer

Ready

Reads user input or documents and detects vague, incomplete, contradictory, or unrealistic requirements. Structured prompt files are implemented.

AI

Analysis

Decision Simulation Engine

Planned

Interactive "what-if" scenario testing for choices like timeline, budget, team size, feature cuts, and launch decisions before execution. Scenario comparison table planned.

AI

Simulation

Planned

Future Lab

Ready

Analyzes business ideas and explores strategic possibilities with AI-driven insights. Helps users think through long-term scenarios and opportunities.

AI

Strategy

SWOT Analysis

Planned

Generates comprehensive Strengths, Weaknesses, Opportunities, and Threats analysis. Planned to render as an interactive 4-quadrant grid visualization.

AI

Analysis

Visualization

Marketing Strategy

Ready

AI-powered marketing strategy recommendations based on business profile. Includes campaign planning, content strategy, and audience targeting.

AI

Marketing

Competitor Analysis

Planned

Deep competitive landscape analysis with actionable insights. Planned to render as a comparison table with structured competitor data.

AI

Analysis

Planned

Financial Forecast

Planned

Revenue projections, cost analysis, and financial modeling. Planned to include cash flow gauge, revenue area chart, and P&L bar chart.

AI

Finance

Planned

Launch Readiness Score

Planned

Calculates a clear score (0–100) showing whether the product is ready for launch across 7 dimensions. Planned to render as radar chart.

AI

Scoring

Planned

Risk Assessment

Planned

Identifies timeline, budget, workload, technical, requirement, and launch-related risks. Planned risk heatmap matrix with Probability × Impact visualization.

AI

Risk

Planned

Report Generator

Ready

Creates comprehensive final reports with risks, decisions, recommendations, and launch status. AI analysis results can be exported.

AI

Reporting

Pitch Deck Assistant

In Progress

Helps structure and refine investor pitch decks. Prompt and tool class exist; UI button needed in tool grid.

AI

Pitching

Meeting Notes

Ready

AI-assisted meeting summarization and action item extraction from conversation transcripts.

AI

Productivity

Document Analyzer

Ready

Extracts insights from uploaded documents and connected sources. Integrates with file parsers for PDF, Word, Excel, CSV, and PowerPoint.

AI

Documents

Image & Logo Analysis

Ready

Vision-based analysis using multimodal AI (Qwen VL, Gemini Vision). Can analyze uploaded images and logos.

AI

Vision

Social Media Analysis

Future

Analyzes social media presence and suggests content strategies. Future integration with Instagram, Twitter/X, and LinkedIn APIs.

AI

Social

Future

 SECTION 2

AI Agent Architecture

18 specialized AI agents orchestrated by a Chief Manager Agent — each handling a specific domain of the launch journey.

#	Agent	Role / Responsibility	Status
1	Chief Manager Agent	Orchestrates the full launch journey across all agents	Ready
2	Business Strategy Agent	Market analysis, GTM strategy, business model validation	Ready
3	Requirement Analyst Agent	Requirements gathering, scope definition, gap analysis	Ready
4	Information Gap Agent	Missing information detection and targeted questioning	Planned
5	Decision Simulation Agent	Scenario analysis, trade-off analysis, what-if modeling	Planned
6	Interface Intelligence Agent	Dashboard UX structure, data layout optimization	Planned
7	Spatial Visualization Agent	3D / 360° journey mapping, spatial data representation	Future
8	Risk Intelligence Agent	Risk identification, scoring, and categorization	Planned
9	Risk Mapping Agent	Risk heatmaps, probability × impact visualization	Planned
10	Launch Readiness Agent	Launch Readiness Score (0–100), dimension scoring	Planned
11	Journey Operations Agent	Roadmap generation, milestone tracking, progress monitoring	Planned
12	Recommendation Strategist Agent	Prioritized recommendations, action planning	Planned
13	Analytics Intelligence Agent	KPIs, dashboard analytics, performance metrics	Planned

OptivianAI — Complete Feature Catalog			
#	Agent	Role / Responsibility	Status
14	Document Intelligence Agent	Insights from connected documents, smart parsing	Ready
15	Integration Agent	App connections, data sync, API orchestration	Future
16	Executive Report Agent	Stakeholder-ready reports, executive summaries	Ready
17	Workflow Automation Agent	Automated agent pipelines, scheduled operations	Planned
18	Team Collaboration Agent	Group projects, roles, tasks, team progress tracking	Future

Agent Architecture Overview

Each feature is handled by a professional specialized agent. The **Chief Manager Agent** coordinates all agents and presents a unified experience to the user. The system uses Gemini API (primary) with DeepSeek and Qwen as fallback providers via OpenRouter. Agents communicate through structured prompts and the execution engine for action delivery.

 SECTION 3

Multi-Provider AI Infrastructure

The technical backbone for AI operations — supporting multiple providers, caching, memory, streaming, and analytics.

Gemini Provider

Ready

Default AI provider using Google's Gemini 2.0 Flash model. Supports text generation, streaming, and vision capabilities.

AIDefaultVision

DeepSeek Provider

Ready

Secondary provider via OpenRouter. Uses DeepSeek R1 for text generation and reasoning tasks. Free tier available.

AIFallback

Qwen VL Provider

Ready

Vision-capable provider via OpenRouter. Uses Qwen 2.5 VL 72B for image analysis and multimodal understanding.

AIVisionFallback

Provider Fallback Chain

Ready

Automatic fallback between providers if one fails. Configurable priority order: Gemini → DeepSeek → Qwen.

AIResilience

Conversation Memory

Ready

Session-aware chat history stored in Supabase `conversation\_memory` table. Maintains context across multi-turn conversations.

AIMemory

Response Caching

Ready

Configurable TTL-based cache with LRU eviction strategy. Reduces API costs and speeds up repeated queries.

AICache

Real-Time Streaming

Ready

Token-by-token streaming of AI responses for real-time user experience. `generateStream()` method implemented.

AIStreaming

Token Tracking & Cost Estimation

Ready

Tracks token usage per model and estimates costs. Usage analytics with pricing per model configuration.

AIAnalytics

AI Analytics & Usage Logging

Ready

Success/failure tracking, request logging, latency monitoring. Analytics tracker with per-tool usage statistics.

AIAnalytics

Prompt Templates System

Ready

37 system prompt modules for every AI tool. Save-and-reuse template library planned for future release.

AITemplates

Pluggable Provider Architecture

Ready

Abstract provider base class with standardized interface. Add new providers by extending BaseProvider.

AIArchitecture

Vision Support

Ready

Multimodal AI support for image analysis via Gemini Vision and Qwen VL. Extracts text and insights from images.

AIVision

Document Processing

Ready

Parses PDF, Word, Excel, CSV, and PowerPoint documents. Extracts text content for AI analysis.

AIDocuments

Structured Logging

Ready

Comprehensive logging system for all AI operations including request/response pairs, timing, and errors.

AIObservability

⚡ SECTION 4

Execution Engine & Autonomous Actions

The bridge between "AI says" and "AI does" — enabling autonomous execution of AI-proposed actions across the platform.

Track B: Execution Infrastructure

Action Registry

Ready

A registry that maps tool types to executable actions. Schema: toolType, actionName, handler, requiresApproval, rollbackHandler, description, safetyLevel. File:

```
src/services/ai/actions/actionRegistry.js
```

Execution

Registry

Phase B1

Execution Engine

Ready

Core engine that orchestrates: intent parsing → validation → permission check → approval → execute → rollback. Supports JSON, inline, and bracketed action markers. File:

```
src/services/ai/actions/executionEngine.js
```

Execution

Core

Phase B2

AI Permission System

Ready

Extends human RBAC with AI-specific rules: spend limits, time-based restrictions, role-based auto-approve levels, and rate limiting. File:

```
src/services/ai/actions/aiPermissions.js
```

Execution

Permissions

Phase B3

Approval Workflow

Ready

State machine: proposed → pending_approval → approved → executing → completed | rejected | expired | rolled_back. Includes 30-minute auto-expiry.

Execution

Approvals

Phase B4

Track C: Autonomous Actions

Create Task from AI Ready

AI analyzes weaknesses or recommendations and offers to create tasks. Uses `taskService.createTask()` via action registry.

Actions

Tasks

Assign Task to Team Member Ready

AI suggests best assignee based on skills/workload via `taskService.updateTask()`.

Actions

Tasks

Update Task Priority/Status Ready

AI re-prioritizes based on deadlines and workload. Rollback support via delete task handler.

Actions

Tasks

Task Deadline Monitoring Ready

Scheduled health checks monitor all tasks, flag approaching deadlines, alert assignees via notifications.

Actions

Monitoring

Task Completion Verification Ready

AI reads task descriptions and compares against completion notes to verify output quality.

Actions

Quality

Send Chat Message Ready

AI sends messages to conversations on behalf of users via `chatService.sendMessage()`.

Actions

Communication

Send Notification Ready

AI notifies users about task assignments, mentions, and alerts via `notificationService.createNotification()`.

Actions

Notifications

Share AI Analysis Result Ready

AI posts its analysis results to a channel or conversation automatically.

Actions

Communication

Save AI Analysis

Ready

Persist AI analysis results to the database for later reference and retrieval.

ActionsData

Data Cleanup Automation

Ready

AI archives old completed/stale tasks past retention period (configurable, default 90 days).

ActionsCleanup

Generate & Send Report

Ready

AI generates a comprehensive report and optionally shares it with team members via chat.

ActionsReporting

Suggest User Provisioning

Ready

AI analyzes team workload and suggests hiring needs or role additions based on overdue rates.

ActionsAdmin

Autonomous AI Manager (Phase D4.9)

Autonomous AI Manager

Ready

A self-operating AI manager singleton with 5 subsystems: **Monitor** (health checks, task monitoring, anomaly detection), **Executor** (auto-executes approved actions), **Learner** (tracks outcomes, adjusts confidence), **Reporter** (daily/weekly summaries), **Scheduler** (timed recurring tasks). Features self-healing capabilities and proactive recommendation generation.

AutonomousMonitoringSelf-HealingPhase D4.9

Capabilities: Scheduled health checks every 60s, task health every 5 min, anomaly detection with configurable sensitivity, auto-execution of low-safety actions, proactive recommendations, auto-escalation of critical issues, one-click rollback (30-second undo window), pending action queue with approval UI.

Default registered actions: create_task, update_task, delete_task, send_message, create_notification, save_analysis, get_analyses, create_conversation, update_assignee_status, generate_report, suggest_provisioning, cleanup_data

Execution Pipeline Flow

AI generates response → `parseIntent()` extracts actionable intents (JSON blocks, inline markers, bracketed markers)

- `validateIntent()` checks against action registry
- `checkPermission()` verifies user has RBAC permission + AI-specific rules
- **Low safety** actions auto-execute; **high/critical** require user approval
- `executeAction()` runs handler with rollback support
- Results logged with `[Undo]` available for 30 seconds

 SECTION 5

Role-Based Access Control (RBAC)

22 roles with granular permission mapping across 13 resources and 5 actions.

The 22 Roles

Level	Roles	Access
 Unrestricted	Super Admin, Owner	Full system-wide access
 Full Except Billing	Administrator	Full access except billing
 Strategic	Director, Executive	Strategic management
 Operational	Manager, Assistant Manager, Team Lead	Operational leadership
 Department	HR, Finance, Marketing, Sales, Operations	Department-specific access
 Engineering	Developer, Designer, QA	Engineering & creative
 General	Support, Staff, Intern	General employees
 External	Client, Guest, Viewer	External / read-only

Permissions Matrix

Each role has granular permissions (View, Create, Edit, Delete, Manage) across 13 resources:

Resource Categories

13 resources: Users, Tasks, Chat, AI, Reports, Dashboard, Analytics, Organization, Billing, Settings, Documents, Notifications, Audit Logs

RBAC

Core

Role Hierarchy

Ranked roles with display info and inherited permissions. Used by permission checks throughout the application.

RBAC

Hierarchy

 SECTION 6

Authentication & Security

Comprehensive auth system with multiple providers, 2FA, session management, and security monitoring.

Email + Password Auth

Ready

Standard email/password authentication with session persistence via Supabase Auth.

Auth

Google OAuth Login

Ready

Sign in with Google via Supabase OAuth integration.

Auth

OAuth

GitHub OAuth Login

Ready

Sign in with GitHub via Supabase OAuth integration.

Auth

OAuth

Email-Based 2FA (OTP)

Ready

6-digit OTP sent to email for two-factor authentication. SHA-256 hashed OTPs stored in `mfa\_otps` table.

Auth

2FA

Password Reset

Ready

Password reset flow with email verification via Supabase Auth.

Auth

Remember Me / Session Persistence

Ready

Extended session duration with "Remember Me" support. Sessions persisted to localStorage with PKCE flow.

Auth

Temp Password Flow

Ready

Admin-created accounts receive temporary passwords. Forces password change on first login.

Auth

Admin

Logout Everywhere

Ready

Session-scoped sign-out that terminates all active sessions.

Auth

Security

Login History

Ready

Tracks every login attempt with IP, provider, device, and success/failure. 90-day retention with automatic cleanup.

AuthAudit

Session Timeout / Auto-Logout

Planned

Configurable idle timeout that automatically logs users out for security.

AuthPlanned

Device Fingerprinting

Future

Trusted device tracking for 2FA. Future enhancement with fingerprinting library.

AuthFuture

Rate Limiting

Future

Rate limiting on auth endpoints to prevent brute force attacks.

AuthFuture

 SECTION 7

Internal Communication

Real-time messaging, file sharing, and AI chat — the collaboration backbone of OptivianAI.

AI Chat Interface

Ready

Conversational AI interface powered by multi-provider support. Full chat UI with tool integration.

ChatAI

Real-Time Messaging

Ready

Internal chat with direct messages and group conversations. Real-time updates via Supabase Realtime.

Chat

File Sharing in Chat

Ready

Upload and share files within conversations — images, documents, and more via Supabase Storage.

ChatFiles

Message Reactions (Emoji)

Planned

Hover-to-react emoji picker on messages. Planned for Phase 2 implementation.

ChatPlanned

Unread Count per Conversation

In Progress

Badge with unread message count per conversation. Partially done — needs polish.

Chat

Conversation Search

Planned

Filter conversations by name in sidebar. Client-side filter implementation.

ChatPlanned

Message Search

Planned

Search within a conversation's messages. In-memory or Supabase query-based.

ChatPlanned

Chat Read Receipts

Future

Show "Seen" timestamps for messages. Per-message or per-conversation (needs design decision).

ChatFuture

 SECTION 8

Task Management

Full task lifecycle management with multi-assignee support, priority, status workflow, and AI integration.

Task Creation

Ready

Create tasks with title, description, assignees, priority, due date, and status.

Tasks

Multi-Assignee Support

Ready

Assign multiple members to a task with per-assignee completion status tracking.

Tasks

Priority Levels

Ready

4 priority levels: low, medium, high, urgent. Visual indicators for each level.

Tasks

Status Workflow

Ready

Complete status flow: pending → in_progress → review → done → cancelled. Archive status for cleanup.

Tasks

Task Deletion

Ready

Delete tasks with confirmation. Rollback support via execution engine.

Tasks

Due Dates

Ready

Set due dates with calendar picker. Overdue flagging and deadline monitoring.

Tasks

Task Drag-and-Drop

Future

Kanban-style board or priority reorder. Needs design decision on view type.

TasksFuture

Task File Attachments

Future

Upload files to tasks via Supabase Storage. Needs design decision on storage backend.

TasksFuture

Task Comments / Activity Log

Future

Comment threads per task with activity history. Needs design decision on storage schema.

Tasks

Future

Task Bulk Actions

Future

Select multiple tasks and batch update status, assignee, or priority.

Tasks

Future

 SECTION 9

Organization Management

Multi-tenant organization structure with staff management, business profiles, and member lifecycle.

Organization Creation

Ready

Create organizations with business details: name, type, website, social links, and owner assignment.

Org

Staff Directory

Ready

Complete staff directory with role-based permissions, contact info, and status.

Org

Member Invitation

Ready

Invite members to organization with temporary passwords. Email invitation with custom template.

Org

Role Assignment

Ready

Assign roles to members from 22 predefined roles. Automatic permission inheritance.

Org

Organization Analytics

Ready

Analytics dashboard for organization: member activity, task completion rates, department performance.

Org

Organization Profile & Settings

Ready

Edit organization details, manage settings, view activity logs and member audit trail.

Org

 SECTION 10

Dashboard & Analytics

Comprehensive dashboards with real-time metrics, charts, KPIs, and AI-powered insights.

Executive Stats Dashboard

Ready

KPI cards with animated counters for key metrics. Links to detail pages planned.

Dashboard

Recharts Integration

Ready

BarChart, RadarChart, AreaChart, PieChart, LineChart all available via recharts library.

Dashboard

Charts

Quick Actions Panel

Ready

Quick action shortcuts for common tasks. Currently 3 items, expansion planned.

Dashboard

Org Overview Widget

Ready

Organization health and performance overview on dashboard.

Dashboard

Calendar Widget

Ready

Calendar display on dashboard. Persistence from localStorage planned.

Dashboard

Task Center Widget

Ready

Recent tasks display with status, priority, and assignee. Shows created date.

Dashboard

AI Usage Dashboard

Planned

Visualize token usage, costs, popular tools, and provider metrics.

Dashboard

Planned

Animated Counter

Ready

Number roll-up animation component for KPI metrics.

Dashboard

Animation

Real-Time Updates

Ready

Supabase Realtime subscriptions for live dashboard updates.

DashboardRealtime

Dashboard Charts (Real Data)

In Progress

Charts currently use `Math.random()` dummy data. Migration to real Supabase data in progress.

Dashboard3

3D Journey Viewer

Future

3D / 360° visual journey viewer built with Three.js and react-three-fiber. Premium scroll-based interactive experience.

DashboardFuture

Dashboard Customizer

Future

Let users pick which widgets appear on their dashboard. Saved per user.

DashboardFuture

Data Export (CSV/Excel)

Future

Export dashboard tables and analytics data to CSV or Excel format.

DashboardFuture

Global Search

Future

Cmd+K / Ctrl+K command palette for global search across all app data.

DashboardFuture

 SECTION 11

Enterprise Role Dashboards

Planned enterprise transformation where every role gets a completely personalized workspace with role-specific KPIs, widgets, and AI assistants. [Future Vision](#)

Role	Focus Domain	AI Assistant	Status
CEO	Strategy, Leadership, Execution	Executive AI — market dynamics, org health	Future
COO	Operations, Process, Coordination	Operations AI — workflow efficiency	Future
CFO	Finance, Budget, Forecasting	Finance AI — budgets, forecasts	Future
CTO	Technology, Infrastructure, Security	Technical AI — system health, security	Future
CMO	Marketing, Brand, Growth	Marketing AI — campaigns, brand	Future
CHRO / HR Manager	HR, Recruitment, Culture	HR AI — recruitment, satisfaction	Future
Sales Manager	Sales Funnel, Pipeline, Revenue	Sales AI — lead scoring, forecasting	Future
Project Manager	Projects, Milestones, Risks	Project AI — delay prediction	Future
Team Lead	Team Tasks, Workload, Reviews	Team Coach AI — workload balance	Future
Employee	Tasks, Productivity, Collaboration	Employee AI — daily assistance	Future
Admin	Users, Permissions, System	Admin AI — infrastructure monitoring	Future

Infrastructure Console

Technical AI metrics (tokens, costs, latency, provider status, model usage, API usage, infrastructure health) belong **only** in the Infrastructure/Admin Console. Business

dashboards show outcome-focused metrics: Business Health Score, Revenue, Profit, Active Projects, Department Performance, Employee Productivity, AI Recommendations, Risks & Opportunities.

 SECTION 12

File Analyzers & Document Processing

Real file upload and parsing for 5 document types, enabling AI-powered analysis of uploaded content.

PDF Analyzer

In Progress

Parse actual .pdf files with pdfjs-dist library. Extracts text for AI analysis.

Documents

Needs Install

Word Analyzer

In Progress

Parse .docx files with mammoth.js. Converts to text for AI processing.

Documents

Needs Install

Excel Analyzer

In Progress

Parse .xlsx files with SheetJS (xlsx). Extracts data tables for AI analysis.

Documents

Needs Install

CSV Analyzer

In Progress

Parse .csv files with PapaParse. Column detection and data extraction for AI.

Documents

Needs Install

PowerPoint Analyzer

In Progress

Parse .pptx files with pptxjs. Extracts slide text and notes for AI analysis.

Documents

Needs Install

Website Analyzer

In Progress

Accept URL and auto-fetch content via CORS proxy. Extracts text for AI analysis.

Documents

Needs API

Note: All file analyzers have their AI prompts and tool classes ready. File upload UI components and parser integrations are pending npm package installations (pdfjs-dist, mammoth, xlsx, papaparse, pptxjs — all already in package.json).

 SECTION 13

UI & User Experience

Premium design system with framer-motion animations, Tailwind CSS, and component library.

Tailwind CSS 4 Design System

Ready

Utility-first CSS with custom color palette, dark mode support, and responsive breakpoints.

UI

framer-motion Animations

Ready

AnimatePresence, motion components, page transitions, and micro-interactions.

UIAnimation

Reusable UI Components

Ready

Badge, Card, ProgressBar, Tooltip, Toast, ErrorBoundary, ScrollReveal, Skeleton, CommandPalette, LanguageSwitcher, RecommendationsPanel, RolePickerModal, SessionTimeoutModal, SetupChecklist

UI

Dark Mode

Planned

Full dark theme using Tailwind dark: variants. Toggle component persists preference to localStorage.

UIPlanned

Inter Font

Ready

Premium Inter font family from Google Fonts. All weights included (300–900).

UI

Lucide Icons

Ready

Comprehensive icon library via lucide-react for all UI elements.

UI

Toast Notification System

Planned

Global toast feedback after saves, creations, deletions, and actions.

UIPlanned

Keyboard Shortcuts

Planned

Cmd+K global command palette, keyboard navigation throughout app.

UIPlanned

Electron Desktop App

Ready

Desktop application with Electron 43. Cross-platform (Windows, macOS, Linux). Native window management.

Desktop

Mobile Responsive

Future

Full responsive design for phones and tablets. Needs breakpoint decisions.

UI

Future

 SECTION 14

Notifications & Alerts

Real-time notification system with read/unread tracking, AI-powered alerts, and multi-channel delivery.

Real-Time Notifications

Ready

In-app notification system with read/unread tracking. Real-time via Supabase Realtime.

Notifications

AI Auto-Notifications

Ready

AI generates notifications for task assignments, overdue tasks, anomalies, and recommendations.

NotificationsAI

Email Notifications

Future

Task reminders, chat notifications, and daily digests via email (SendGrid/Resend).

NotificationsFuture

Auto-Escalation

Ready

AI escalates overdue and critical tasks to managers automatically.

NotificationsAI

Notification Preferences

Future

Per-user notification settings for different event types and channels.

NotificationsFuture

Announcements / Broadcasts

Future

Admin broadcasts to all users. Where shown: popup, banner, or notification center?

NotificationsFuture

 SECTION 15

Supabase Backend & Database

Complete PostgreSQL backend with RLS policies, real-time subscriptions, Edge Functions, and storage.

PostgreSQL Schema

Ready

15+ tables: organizations, profiles, staff_credentials, conversations, messages, tasks, ai_analyses, conversation_memory, ai_request_logs, user_sessions, login_history, role_permissions, mfa_otps, notifications

Database

Row-Level Security (RLS)

Ready

RLS policies for all tables. Role-based data access control at database level.

Database

Security

Realtime Subscriptions

Ready

Supabase Realtime for live updates on chats, notifications, tasks, and dashboard data.

Database

Realtime

Edge Functions

Ready

Server-side functions: send-otp (email 2FA), delete-user (account deletion), daily-digest (scheduled emails), cors-proxy (planned).

Database

Edge

Storage Buckets

Ready

User avatars bucket and chat files bucket for file uploads and sharing.

Database

Storage

Email Templates

Ready

Custom HTML templates: confirmation, password reset, magic link, invite, change email.

Database

Email

Database Migrations

Ready

Sequential migration files for all schema changes. Production migration script available.

Database

Login History Table

Ready

90-day retention with automatic cleanup. Tracks IP, provider, device, success/failure.

Database

Security

Audit Log Table

Ready

1-year retention for admin action tracking.
Who did what and when.

DatabaseAudit

Developer Mode

Ready

localStorage-based mock data when no
Supabase credentials configured. All
features work locally.

DatabaseDev

 SECTION 16

Vision & Future Features

Long-term enterprise milestones that transform OptivianAI into a full Enterprise Role-Based Operating System.

Phase 9: Enterprise Enhancements (Planned Future)

AI Project Orchestration

Future

Full workflow: CEO sets objective → AI creates plan → assigns tasks → monitors execution → reports results.

Enterprise

Future

Intelligent Task Delegation

Future

AI assigns tasks based on skills, workload, and availability.

Enterprise

Future

Workflow Automation

Future

AI automates repetitive business processes across departments.

Enterprise

Future

AI Decision Support

Future

AI presents options with probability analysis for executive decisions.

Enterprise

Future

AI Risk Detection

Future

Proactive identification of project, financial, and operational risks.

Enterprise

Future

Executive Insights Engine

Future

AI distills complex data into actionable executive summaries.

Enterprise

Future

Predictive Analytics

Future

AI forecasts trends, revenue, and resource needs.

Enterprise

Future

Organization Health Engine

Future

Real-time composite score across departments, projects, and people.

Enterprise

Future

Cross-Department Intelligence

Future

AI identifies synergies and friction points between departments.

Enterprise

Future

Advanced Business Reports

Future

Rich, exportable reports with charts and AI commentary.

Enterprise

Future

Competitor Intelligence

Future

Automated competitor tracking and analysis.

Enterprise

Future

AI Meeting Intelligence

Future

Meeting notes, action items, and follow-up automation.

Enterprise

Future

AI Knowledge Base

Future

Centralized organizational knowledge with AI search and Q&A.

Enterprise

Future

AI Memory System

Future

Long-term memory across conversations, decisions, and user preferences.

Enterprise

Future

Premium Motion Design

Future

Sophisticated animations, transitions, and micro-interactions throughout UI.

Enterprise

Future

Plugin Ecosystem

Future

Third-party plugin marketplace and SDK for extending platform.

Enterprise

Future

Third-Party Integrations

Future

Slack, Teams, Google Workspace, Salesforce, SAP connectors.

Enterprise

Future

i18n / Internationalization

Future

Multi-language support. Needs language decisions.

Enterprise

Future

Accessibility (a11y)

Future

WCAG-compliant design audit and improvements.

Enterprise

Future

WebSocket Real-Time

Future

Upgrade from polling to full WebSocket real-time for all updates.

Enterprise

Future

AI Avatar with Voice

Future

3D AI avatar with voice synthesis for natural interactions.

Enterprise

Future

Daily Digest Email

Future

Scheduled daily summary email with task updates, notifications, and AI insights.

Enterprise

Future

Full-Text Search

Future

Search across all app data. Needs Meilisearch, Elasticsearch, or Supabase full-text.

Enterprise

Future

PWA Offline Support

Future

Progressive Web App with offline mode for critical tasks. Service worker + manifest.

Enterprise

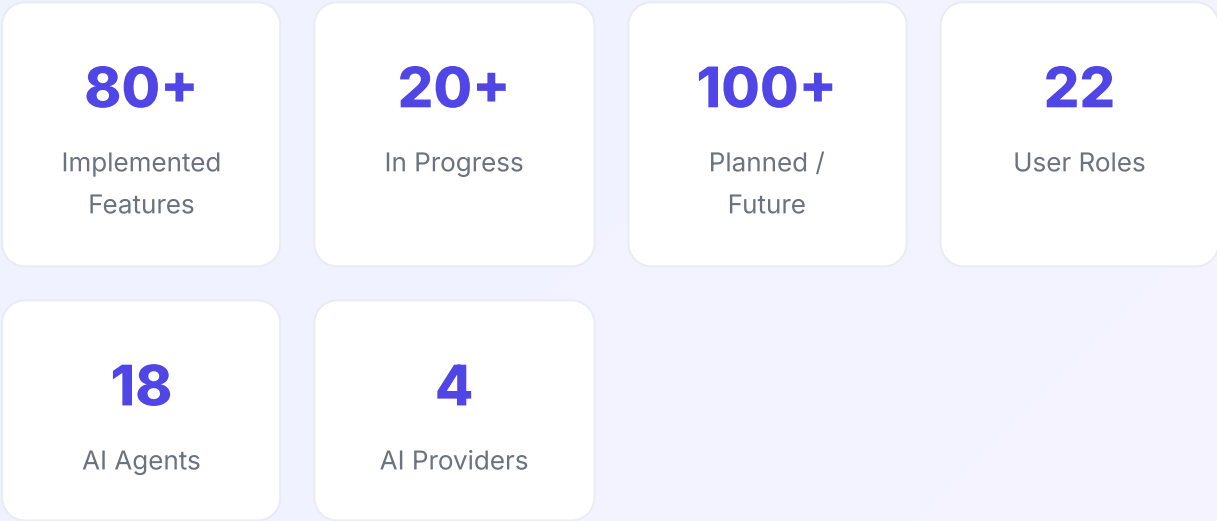

Future

 SUMMARY

Feature Summary & Statistics

Complete overview of OptivianAI's feature landscape by status, category, and implementation progress.

 Feature Count by Category

Technology Stack

Layer	Technology
Frontend	React 19, Vite 7, React Router 7, Tailwind CSS 4
Desktop	Electron 43
Backend	Supabase (PostgreSQL, Auth, Realtime, Storage, Edge Functions)
AI Providers	Gemini API, OpenRouter (DeepSeek, Qwen)
Animations	framer-motion 12
Charts	recharts 3
Icons	Lucide React
3D Graphics	Three.js, react-three-fiber, drei

Layer	Technology
Package Manager	npm
Testing	Vitest

Database Tables

Category	Tables
Core	organizations, profiles, staff_credentials
Communication	conversations, conversation_participants, messages
Tasks	tasks
AI & Analytics	ai_analyses, conversation_memory, ai_request_logs
Auth & Security	user_sessions, login_history, role_permissions, mfa_otp
Notifications	notifications
Storage Buckets	avatars, chat_files

Quick Start

Domain: Decision Intelligence | **Team:** Veronyx | **Status:** Planning & Foundation Phase

Run: `npm run dev` (browser) or `npm run dev:electron` (desktop)

Test: `npm test` | **Build:** `npm run build`
